Profile

Final-year cybersecurity engineering student at the International University of Rabat (UIR), seeking a 4–6-month PFE internship starting January 2027. Hands-on academic experience in Linux hardening, network security, and cyber threat intelligence, complemented by research internships in blockchain and IoT security.

Internships

• 2026 | Research Internship · UIR, LERMA Laboratory · 6 weeks

Developed and deployed OliveChain, a Hyperledger Fabric application for olive supply-chain traceability and waste management.
Implemented blockchain-based workflows covering farming, milling, and the recycling of olive production waste.

• 2025 | Research Internship · UIR, LERMA Laboratory · 5 weeks

Contributed to build and secure an environmental monitoring system using Raspberry Pi and IOTA Tangle, focusing on the integrity of collected sensor data.
Integrated IoT monitoring with distributed ledger technology to support traceable environmental records.

• 2024 | IT Technician Internship · DSI MEN · 4 weeks

Used GLPI to maintain IT asset records and support the organization and tracking of IT equipment.2023 | Introductory Internship ·

• SPSOFT SARL · 2 weeks

Design of an e-commerce website using WordPress.

Technical skills

• **Programming:** C, Python, HTML, PHP.

• **Systems and networks:** Windows Server AD, TCP/IP, routing, switching, VLANs, SDN, Linux hardening, SSH, PAM, access controls, and vulnerability assessment.

• **IoT and blockchain:** Raspberry Pi, IOTA Tangle, distributed ledger technologies (DLT), Hyper Ledger Fabric, Smart Contract, P2P.

• **Other areas:** foundational knowledge of cloud computing, artificial intelligence and cryptography.

Education

2024–2027 | **Engineering Degree in Cybersecurity** · International University of Rabat

Expected graduation: 2027.

2022–2024 | **BTS in Computer Systems and Networks** · Lycée El Farabi, Salé

2022 | **Baccalaureate in Physical Sciences** · Aven Academy Lamzibri, Salé

Academic projects

• **Linux System Hardening and Administration — Ubuntu, OpenSSH, PAM**

Hardened an Ubuntu Linux environment by configuring user and group permissions, SSH authentication, PAM policies, and password aging.
Implemented failed-login lockout controls and system logging to strengthen access security and support monitoring.

• **Dark Web Scraping and Analysis for Cybercrime Intelligence**

Developed a Python-based collection and analysis tool to gather content from selected sources for cyber threat intelligence research.
Organized collected data into structured records and built a dashboard to support exploration and review.

• **SQL Injection Attacks and Defense**

Explored SQL injection techniques in a controlled lab (DVWA) to understand how unsafe database queries can expose application data.
Evaluated defensive measures for preventing SQL injection and strengthening database access security.

• **Sports Image Classification Using Microsoft Azure**

Built an image classification project using Microsoft Azure to categorize images by sport.
Evaluated model predictions on test images to assess classification performance.

• **Facial Recognition for Attendance Tracking Using Python:**

Developed a Python-based facial recognition application to identify registered users and record attendance automatically.
